Your follow-up visits

Your next injection

Friday, October 16, 2026

Due date - call us to schedule or reschedule

With clinic confirmation, you may come in up to 3 days before or 3 days after your due date. Call ahead so we can prepare your medication; an injection due date does not reserve an appointment time.

Your next provider appointment

Tuesday, November 3, 2026 | 1:45 PM

With **Synthetic Appointment Provider for Comprehensive Follow-up and Medication Management, PMHNP-BC**

Video visit · Video visit: use the connection instructions confirmed by the clinic. Contact the front desk if the link has not arrived. This provider appointment is separate from the injection visit; confirm the injection plan with clinic staff.

For appointment changes, please call the clinic.

Why timing matters

This medication is released slowly from just under the skin between injections. The amount in your body is lowest right before your next dose is due.

A late injection lets that level keep falling, and symptoms can return before the next dose takes hold.

Caring for your injection site

Some tenderness, redness, or a small bump in the upper arm is normal for a day or two. A cool pack helps.

Do not rub or scratch the area. Leave it uncovered and keep it clean and dry.

Your next injection should go in a different spot than today's, so the same patch of skin is not used twice in a row.

Do not let anyone inject into skin that is sore, red, bruised, hard, callused, or tattooed. Point that out to the nurse if it applies to you.

What you may notice

- Follow the oral medication plan from your clinician. Do not stop or change a medicine unless they tell you to.
- Mild drowsiness or restlessness can happen in the first few days.
- Get up slowly from sitting or lying down for the first day or two.

Call the clinic at (909) 887-6222 if

- You develop new stiffness, tremor, or unusual movements you have not had before.
- You feel very restless and cannot sit still.
- Pain, swelling, warmth, drainage, or a rash at the injection site gets worse.
- You cannot come within the clinic-confirmed 3-day window, or need to change your visit.
- Anything feels unusual or worries you.

Call 911 now or go to the nearest emergency room if

- Trouble breathing, chest tightness, or severe dizziness.
- Swelling of the face, lips, tongue, or throat.
- High fever with muscle stiffness, confusion, or a racing heartbeat.
